- * Pig Crops
- * Intentions

- * Operations
- * Inventory Values
- * Revisions for 1984

INVENTORY DOWN 3 PERCENT: U.S. inventory of all hogs and pigs is estimated at 52.3 million head on December 1, 1985, according to the Crop Reporting Board. This is 3 percent below a year ago and 8 percent less than December 1, 1983.

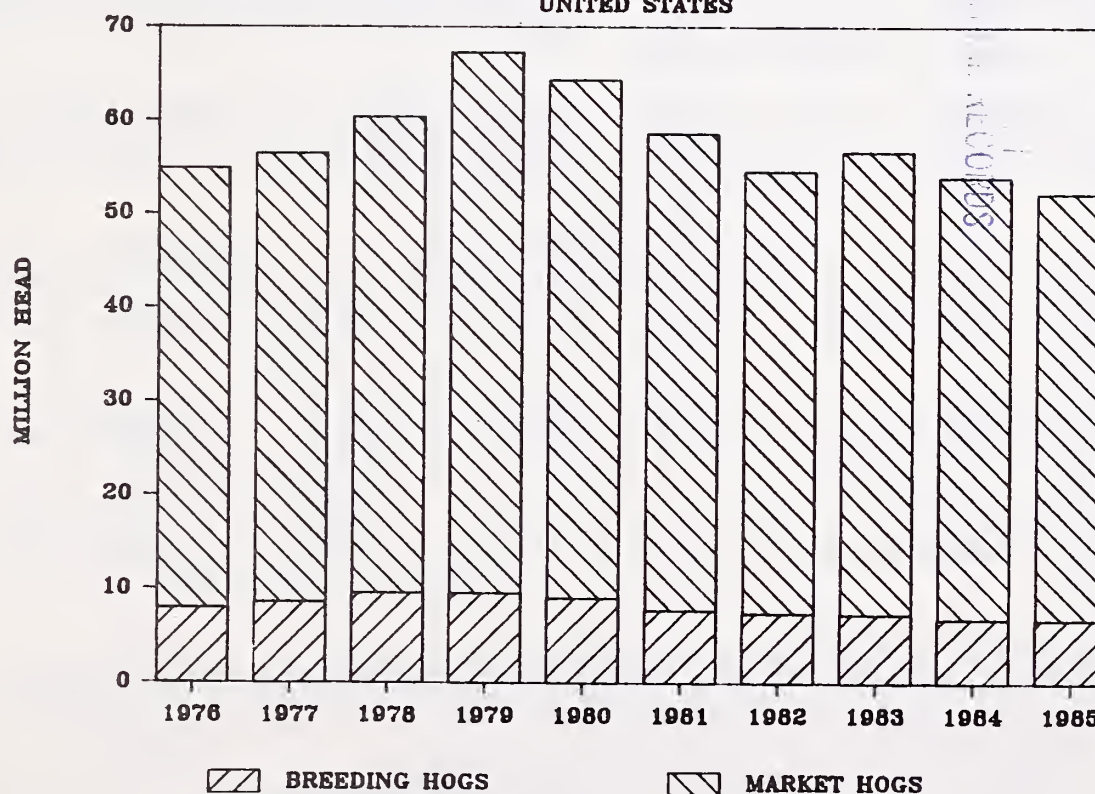

-- Breeding hog inventory at 6.78 million, is 2 percent below last year and down 8 percent from two years ago.

-- Market hog inventory at 45.5 million, is 3 percent below a year ago and 8 percent below two years ago.

The 10 QUARTERLY STATES with 41.1 million head on December 1, 1985, are down 3 percent from a year earlier and 7 percent from December 1, 1983. These 10 States account for approximately 79 percent of the total U.S. hog and pig inventory.

DECEMBER 1 HOGS AND PIGS INVENTORY

UNITED STATES

1985 PIG CROP: The U.S. pig crop for 1985 totaled 86.0 million head, 1 percent below 1984 and 8 percent below the 1983 pig crop.

- December 1984-May 1985 pig crop, estimated at 42.5 million head, is up slightly from a year earlier but 10 percent below the comparable period in 1983.
- June-November 1985 pig crop, estimated at 43.5 million head, is 2 percent below last year, and 5 percent below the June-November 1983 crop.

A total of 5.67 million sows farrowed during June-November 1985, 3 percent below a year earlier and 8 percent below the June-November 1983 period. The litter size during this period averaged a record high 7.67, up from the previous record of 7.54 set a year earlier and up from 7.41 for the June-November 1983 period.

In the 10 QUARTERLY STATES, the June-August 1985 pig crop totaled 16.9 million head, 1 percent below the same quarter a year earlier. For the September-November period, the pig crop of 17.3 million head is 1 percent below the same period in 1984.

FARROWING INTENTIONS: U.S. hog producers intend to have 5.59 million sows farrow during the December 1985-May 1986 period, up fractionally from a year ago.

Intentions in the 10 QUARTERLY STATES totaled 1.96 million sows to farrow during December 1985-February 1986. This is up slightly from actual farrowings during the same period a year earlier. The March-May 1986 intentions, at 2.42 million, are fractionally below the March-May 1985 quarter.

RELIABILITY AND ESTIMATING PROCEDURES: Primary data used in setting these hog estimates were obtained from a sample of farmers across the U.S. using probability surveys. Information was collected by mail, telephone and personal interviews. Since all operations raising hogs were not included in the sample, survey estimates are subject to sampling variability. This variability, as measured by the relative standard error, is about two percent at the U.S. level for hog inventory. This means that chances are approximately 95 out of 100 that survey estimates will be within four percent of the complete coverage value if the same procedures were used to survey all producers. Survey estimates are also subject to non-sampling errors such as omissions, duplications, and mistakes in reporting, recording and processing the data. These errors cannot be measured directly, but they are minimized through rigid quality controls in the data collection process and a careful review of all reported data for consistency and reasonableness.

The sampling variability of survey estimates on intended farrowings is slightly larger than that for inventories. More important, actual farrowings may differ significantly from reported intentions due to changes in economic and environmental conditions. For second intentions these differences have exceeded 5 percent in 3 of the last 10 quarterly December-February pig crops. For first intentions these differences have exceeded six percent in 3 of the last 10 quarterly March-May pig crops.

In setting the inventory estimates, the Crop Reporting Board constructed a U.S. balance sheet using estimates on births, deaths and check data on slaughter, imports and exports. The balance sheet provided an additional check on survey inventory estimates.
